

## PROTECTIVE HEATED GROUND COVERING SYSTEM

# We've got it covered

All Weather Covers is a unique design that utilises multilayered polyethylene as an extremely lightweight and practical ground cover. Our custom made system provides a fully waterproof, yet breathable turf and ground protection solution for all sports grounds, racecourses and arenas, as well as airport runways.

Acting as a waterproof insulation blanket, All Weather Covers actually enhances the growth and quality of all grass pitches and sports surfaces during periods of severe weather conditions. The covers can **prevent cancellations** of fixtures and schedules due to frost, snow or water logging.

The top layer is entirely waterproof, with gutter attachments for run-off and excess water, while the bottom layer allows for air to circulate to the grass underneath. All Weather Covers are further enhanced by the function of a continuous warm air flow system from heaters between the layers.

Sizes can be tailored to suit any customer's individual requirements and be finished with either stitched or hemmed and eyeleted edging.

**All Weather Covers enable large areas to be covered quickly, easily and safely with minimum effort, resulting in a more economical alternative to expensive undersoil heating systems.**

- **Cover & Protect**

100% waterproof sports ground flat sheet covering system, designed to promote air flow and natural light that ensures the best treatment for grass areas.

- **Durable yet breathable**

Warm air flow introduced into the multiple high density polyethylene layers protects from excessive rainfall while also preventing a frozen surface.

- **Custom Designs**

Ground covers are made for all client specifications, sizes and requirements and include brass eyelet and run-off guttering attachments.

- **Sales, Rent, Installation, Storage**

All Weather Covers offers a variety of practical and inexpensive purchase, lease and hire options along with full storage, and fast delivery and installation services.

**All Weather Covers - the pioneering product that protects sports and ground surfaces.**

## How the All Weather Covers work:

## Benefits of the All Weather Cover system:

- Protects grass, playing and hard surfaces
- Waterproof top layer
- Breathable bottom layer
- Warm air circulation
- Economical
- Fast Installation
- Custom Made
- Re-usable
- Durable
- Excellent Value
- Rip and tear resistant
- Washable
- Flexible purchase options
- Innovative Design
